

# Week 1 - Individual Reflection

Erik Jergéus

March 2019

## **1 What do I want to learn or understand better?**

How to set up and structure a project in the starting phase, because in most courses you've only gotten to build on a half-finished assignment. Furthermore I want to increase my understanding of the SCRUM process to make sure I understand what the course entails and achieves the most out of it.

## **2 How can I help someone else, or the entire team, to learn something new?**

I have gotten a written explanation of SCRUM from one of my peers and have shared that with my group in our README in the github project. I shall also try and help my fellow course mates whom has less experience in programming and development, by offering my services.

## **3 What is my contribution towards the team's use of Scrum?**

The only concrete thing, besides the explanation described in the last section, was during the Lego exercise. When we executed that we all took similar roles and I'm unsure if I contributed with anything out of the ordinary, i.e. discussion about our approach and a solid worker.

## **4 What is my contribution towards the team's deliveries?**

So far I have tried to contribute to deciding and discussing our project, by coming up with ideas and sharing my expertise. Just like the other decisions we've made I have discussed and come up with our social contract.
