

Week 2 - Individual Reflection

Erik Jergéus

April 2019

1 What do I want to learn or understand better?

I want to better learn how to develop in android studio, and understand how to manage APIs better. This is mainly because I feel that I need to take the role as one of the more experienced developers in the group, and for that purpose I feel that being on the forefront of our development is a must. As an addition to that I want to learn how I can manage putting in extra work at my own leisure (which is how I usually work on projects), while still following the SCRUM process. This will both be necessary, so that I can feel the most comfortable with working during the course, but also since it's highly probable that I'll want to put in a lot of time into the course.

2 How can I help someone else, or the entire team, to learn something new?

The best way to help the rest is probably to get around to building the base of the project. When we have a base it should be easier for the rest of the group to work better and manage their time to parts of the project which are more important. Furthermore I want to make sure I learn everything I need to be ready to answer, or at least point in the right direction, for any question my group members might have.

3 What is my contribution towards the team's use of Scrum?

So far we have barely used SCRUM, since we just finalized what our project should be. Therefore we have been unable to use a SCRUM workflow. We could in theory have done it for our mockups, but since we had only two days to make them (because we were late on deciding our project), it would be very hard to do such a short sprint while keeping it efficient.

4 What is my contribution towards the team's deliveries?

Just like last week we mainly discussed our idea. Besides that we have made the business model, mockups and started to set up our projects. My primary focus has been on setting up the project and researching on how to develop android apps.
