

**-what do I want to learn or understand better?**

This sprint I have learned a lot about how the database works and how the communication between firebase and the application works. I learned this by facing multiple issues with the database and learning how to resolve through online resources. This is what I intended to learn and am happy I got the opportunity to.

Next week is going to be interesting since it will effectively be our last sprint coding. I will try to learn how to finalize an application and the scrum procedures that proceed this as well as follow.

I intend to do this by talking with the group how to approach this and together realize a plan and reflect at the end of the week how the process resulted.

**-how can I help someone else, or the entire team, to learn something new?**

Since I learned so much about how the database works I could advise teammates on how to code certain bits in their branches. Hopefully, I was able to help out a whole bunch might've been able to provide some knowledge as to how firebase works overall.

This week I want to be able to help out with optimizing the database, as well as the code, for its final form. Since some parts of the program heavily relies on code that originally wrote I will be ready to help out whenever my documentation of the code proves lacking.

To do this I have made sure to mark most of my code with my name, so my teammates know whom to ask.

**-what is my contribution towards the team's use of Scrum?**

My contribution to this weeks use of scrum can mostly be boiled down to the initial picking of user stories. I was able to help out by discussing and revising both new and already existing user stories.

I want to help out by making this final sprint will be a smooth and painless one.

To do this I will put a lot of effort in tomorrow's sprint planning to make sure we start off right and have a good structure for the rest of the week.

**-what is my contribution towards the team's deliveries?**

Together with Mathias we completed the user story about both creating an account and logging in with the account to the application. I'm content with how it turned out functionally and works beautifully.

I also grabbed a user story together with Lovisa, but together with Pernilla they made an amazing effort and completed it before I ever got to provide any meaningful effort.

This week I intend to complete as many and as large user stories as I need to make sure the application is finished before deadline, as well as help with other deliverables such as reviews and reflections.

To do this I will discuss with my team what user stories that are left are important for the finished application and plan our sprint accordingly.
