

W7 Reflection DAT256

Stefan Chan

May 2019

What do I want to learn or understand better?

After reflecting over the course of the project, I would say that the Scrum process has been an educational experience in how to build an application for a client where everything is not defined. I would want to see if I could improve my own proficiency in using Scrum for further projects. Given that the team's usage of Scrum gradually improved over time, I feel that in order to improve is going to be simply getting more experience with Scrum and reflecting over what happens in order to see if could learn something new or improve.

How can I help someone else, or the entire team, to learn something new?

Same as last week, there was no need to help someone else to learn. Instead, we helped each other by testing code or fixing bugs.

What is my contribution towards the team's use of Scrum?

I have attended with one exception attended all meetings and helped write the team review and review retrospective. Compared to the previous week, my workload lessened considerably and allowed me to focus on writing and not having to worry about bugs or other issues during the meeting. Since this is the last sprint, I would say that good planning is something to take away from this project when it comes to future sprint projects.

What is my contribution towards the team's deliveries?

As mentioned, I finished my workload in good time and helped others by testing their code and giving feedback for what needs to be improved or fixed. Personally, I feel this is as good as it can become when it comes to deliveries for

me, and therefore I cannot say much more than to simply plan ahead so that everything is done to the end of the sprint.
