

**-what do I want to learn or understand better?**

Last sprint I had hoped to learn more about how you are supposed to finalize an application before turning it in, but since the group agreed to postpone the coding deadline to this coming sprint I have not learned much about that topic, or anything else for that matter.

This week I wish learn about finalizing as well as making a technical presentation of an application. I hope to be one of the persons presenting the application and therefore I must learn how to properly do this.

Hopefully my team agrees that I may be one of the presenters and if so, I will consult with the other team members about the presentation and together with the other presenters learn about the process ahead.

**-how can I help someone else, or the entire team, to learn something new?**

I have continued to prove useful for the team with my knowledge of the database and can advise the team whenever necessary. I also helped Stefan with an issue he could not overcome alone, to help him finish his user stories from last week.

Since I have previously studied rhetorics I hope to be able to help those who are presenting the application to properly address the audience. As well as help out with the code wherever I can.

I will do this by making myself available for my team members as often as I can.

**-what is my contribution towards the team's use of Scrum?**

My contribution this past week mostly lies in me being present at the sprint planning and being able to discuss what user stories to focus and what user stories to be revised/made/removed.

This week I will help out by discussing what user stories should be implemented before the project is finished.

To do this I will be present at the sprint planning.

**-what is my contribution towards the team's deliveries?**

I have completed two user stories, one focused on the ability of making spots private and one about updating the 'about'-page of spots. Since the former one proved to be much tougher than the team originally thought I have put a lot of effort in finishing it. In the end it works beautifully and I'm happy with how it turned out.

This week I intend to make the presentation and if time allows it, perhaps a small user story.

I will discuss with my team to make sure effort is evenly distributed to make sure my time is efficiently used.
