

W4 Reflection DAT256

Stefan Chan

May 2019

1 What do I want to learn or understand better?

The last two weeks I have learned more about how to implement and use GUI-elements in a way that benefits the user. Beyond that, I haven't done anything more regarding coding in general, as most of the work I did was similar to what I did in the previous weeks. I personally want to change it up so I can work on something new, such as the database or the API for the map so that the project does not become monotone work for me. Since the next sprint's user stories has not been assigned yet, I can (hopefully) be able to work with a little with databases next week.

2 How can I help someone else, or the entire team, to learn something new?

The problems that the team faced was either with firebase (our database system) or github. Since I don't know the firebase system well, and usually someone else is already helping others with github related issues, I would say that for this week that I didn't really help anybody. This doesn't mean that I am not able to help, it is often the case someone else already has risen up for the occasion.

3 What is my contribution towards the team's use of Scrum?

I have participated in group meetings, helped in writing the team reflection and review retrospective. I have also finished implementing one user story and currently working on an another user story. For the next sprint I want to try to become more involved in the user stories in order to outline the requirements as good as possible.

4 What is my contribution towards the team's deliveries?

I have finished implementing the user stories assigned to me and started working on an another user story. Compared to the previous week where we worked with horizontal user stories, the revised user stories proved to have more immediate customer value and to be completable since there are few to none dependencies. This lead to much more work being done compared to the previous sprint.
