

W6 Reflection DAT256

Stefan Chan

May 2019

What do I want to learn or understand better?

As the project is coming to a close, there is not much else to learn as the group has mostly concentrated in implementing the remaining user stories and fixing bugs. If there were more time I would likely want to learn more about how to use Android fragments, as I didn't work much with it during the project.

However, something I would like to be better in is estimating the velocity of an user story, as two user stories I was assigned to had a much lower velocity in relation to the amount of work that was required. This and the need to refactor the code due in order to take advantage of new functionality made the user stories take multiple sprints to finish. While now I have learned to avoid these types of situations(more communication in order to specify the details for implementation), I do like to do more scrum-projects to be more experienced in its usage.

How can I help someone else, or the entire team, to learn something new?

While I have helped in testing code, I haven't helped someone to learn something new this week.

What is my contribution towards the team's use of Scrum?

As mentioned in the previous reflection (W6 Reflection), I wanted to try to be more active in the meeting for team reflections and review retrospective. Compared to the previous week, I was more active in the meeting but not as much I would have liked. This was due to having to fix bugs that did not occur during initial testing. I do not see a way to avoid this, beyond more comprehensible testing by other members of the group which were busy with other work.

What is my contribution towards the team's deliveries?

This week I finished the user stories that should have been finished the previous sprints. Since I have been sick and not been able to attend daily scrum meetings, I was not able to work as much I would normally during this sprint. This was anticipated during this sprint planning, meaning I was assigned only little so that I could properly finish implementing the overdue user stories. I still believe in order to avoid this situation to occur again is to manage my own time better and more communication with the group.
