

**-what do I want to learn or understand better?**

I have put a lot of focus on making mockups and learning tools for this endeavour. Since we changed project direction entirely halfway through the week I've been fortunate enough to be able to make two different mockups.

Next week the real scrum process will finally begin and I look forward to learn how this project group will work and progress together. I want to learn making android pages and activities so that I can work effectively during the duration of the project.

To do this I plan on doing a few online exercises to learn android prior to tuesday so that I'm ready to code from the get-go.

**-how can I help someone else, or the entire team, to learn something new?**

This week I've been able to help my teammates with making mockups and constructing effective UI aswell as UX. This is one of my favourite areas of coding and has proven to be useful for the group.

I want to be able to continue help the group with this for the entire duration of the project since i enjoy helping my teammates with UI and UX.

To do this I will constantly make sure that my teammates know I'd love to help out and, in a respectful manner, discuss questionable design decisions.

**-what is my contribution towards the team's use of Scrum?**

So far we have not yet worked according to Scrum. For one, the tasks at hand have been really hard to cut vertically and split up equally, but also the tasks have been small enough to complete in small task groups rather than planning an entire Scrum for it.

I would like to be one of the leading Scrum-representatives in the group (e.g. PO or Scrum master) in order to learn and contribute more to the Scrum process. It interests me to manage scrum processes so I will try to maximize doing this for the duration of the project.

I will discuss this with my team and come to a conclusion as to what exactly the responsibilities of these roles consists of and who's most suited for the task.

**-what is my contribution towards the team's deliveries?**

I have mainly contributed with making mockups, but also discussing project ideas and planning meetings and booking rooms.

Next week I plan to help with scrum as much as possible, make user stories, tasks etc. I'm going to help out with my teams reflection and make this first week of Scrum as smooth and effective as possible. I will try to assign myself some easy tasks for this first week in order to test my own ability and not over-exert myself.

To do this I will attend every meeting and allocate some coding to time outside of these meetings in order to make it.
